

**chitosan based systems for biopharmaceuticals delivery** - *chitosan is a linear polysaccharide commercially produced by the deacetylation of chitin it is non toxic biodegradable biocompatible and acts as a bioadhesive with otherwise unstable biomolecules making it a valuable component in the formulation of biopharmaceutical drugs, a review on the strategies for oral delivery of proteins* - *in the modern world a number of therapeutic proteins such as vaccines antigens and hormones are being developed utilizing different sophisticated biotechnological techniques like recombinant dna technology and protein purification, nanomedicine and drug delivery a mini review springerlink* - *the most promising application of nanomaterials is the promise of targeted site specific drug delivery the potential of eliminating a tumorous outgrowth without any collateral damage through nanomaterial based drug delivery has created significant interest and nanoparticles form the basis for bio nano materials and major efforts in designing drug delivery systems are based on, the emergence of peptides in the pharmaceutical business* - *this minireview touches upon the challenges and opportunities peptides experience on the track to become an approved pharmaceutical peptide attributes originally considered troublesome with respect to drug development may now turn out to be more convenient rather than unfavourable*
