

1 biodiversity what is it where is it and why is it - *biodiversity is the variability among living organisms from all sources including terrestrial marine and other aquatic ecosystems and the ecological complexes of which they are part this includes diversity within species between species and of ecosystems biodiversity forms the foundation of the vast array of ecosystem services that critically contribute to human well being, biomes conserving biomes wwf* - *biodiversity is not spread evenly across the earth but follows complex patterns determined by climate geology and the evolutionary history of the planet, loss of biodiversity and extinctions global issues* - *sylvia earle here s how to protect the blue heart of the planet ted talks february 2009 increasing rapid ocean acidification caused by the oceans absorbing more carbon dioxide than usual because it is emitted by humans more than it should also affects marine ecosystems as explained on this site s climate change and biodiversity page, a theory of global biodiversity mpb 60 monographs in* - *the number of species found at a given point on the planet varies by orders of magnitude yet large scale gradients in biodiversity appear to follow some very general patterns, latitudinal gradients in biodiversity ecology info* - *latitudinal gradients in biodiversity luz boyero school of tropical biology james cook university australia note this online review is updated and revised continuously as soon as results of new scientific research become available, 7 dimension 3 disciplinary core ideas earth and space* - *7 dimension 3 disciplinary core ideas earth and space sciences e arth and space sciences ess investigate processes that operate on earth and also address its place in the solar system and the galaxy thus ess involve phenomena that range in scale from the unimaginably large to the invisibly small, disasters nuclear accidents water effects* - *of all the environmental disaster events that humans are capable of causing nuclear disasters have the greatest damage potential the radiation release associated with a nuclear disaster poses significant acute and chronic risks in the immediate environs and chronic risk over a wide geographic area radioactive contamination which typically becomes airborne is long lived with half lives, earth and life processes discovered from seafloor* - *earth and life processes discovered from seafloor environments volume 7 a decade of science achieved by the integrated ocean drilling program iodp developments in marine geology 1st edition, the pollution of the marine environment by plastic debris* - *the literature on marine debris leaves no doubt that plastics make up most of the marine litter worldwide though the methods were not assessed to ensure that the results were comparable table 1 clearly indicates the predominance of plastics amongst the marine litter and its proportion consistently varies between 60 and 80 of the total marine debris gregory and ryan 1997, woa impacts and carrying capacity* - *woa world population awareness is a non profit web publication seeking to inform people about overpopulation unsustainability and overconsumption the impacts including depletion of natural resources water oil soil fertilizers species loss malnutrition poverty displacement of people conflict and what can be done about it women s advancement education reproductive health care, ecology and evolution biological sciences cal state la* - *ecology and evolution faculty research interests in the area of ecology and evolution include conservation and evolutionary genetics aguilar lab theoretical population biology desharnais lab bryophyte ecology and evolution ontogeny and evolution of vetebrate locomotion evolutionary ecology of marine invertebrates plant physiology anatomy ecology and evoution scoffoni lab, a hierarchical approach to defining marine heatwaves* - *1 introduction marine heatwaves and their ecological impact ecosystems around the world have responded to anthropogenic climate change with major implications for ecological goods and services rosenzweig et al 2008 links between a changing climate shifts in species distributions and the structure of communities and ecosystems have been documented convincingly for many taxa across, wildlife guide national wildlife federation* - *america is privileged with a stunning array of animals plants and wild destinations each with its own incredible story get to know the amazing wildlife in your backyard and beyond, 6 what actions can be taken to conserve biodiversity* - *at the national level integrating biodiversity issues into agriculture fishery and forestry management encourages sustainable harvesting and minimizes negative impacts on biodiversity biodiversity will only be conserved and sustainably used when it becomes a mainstream concern of production sectors agriculture is directly dependent on biodiversity but agricultural practices in recent*
